

PAINT SUPPLY SYSTEMS

PAINT SUPPLY

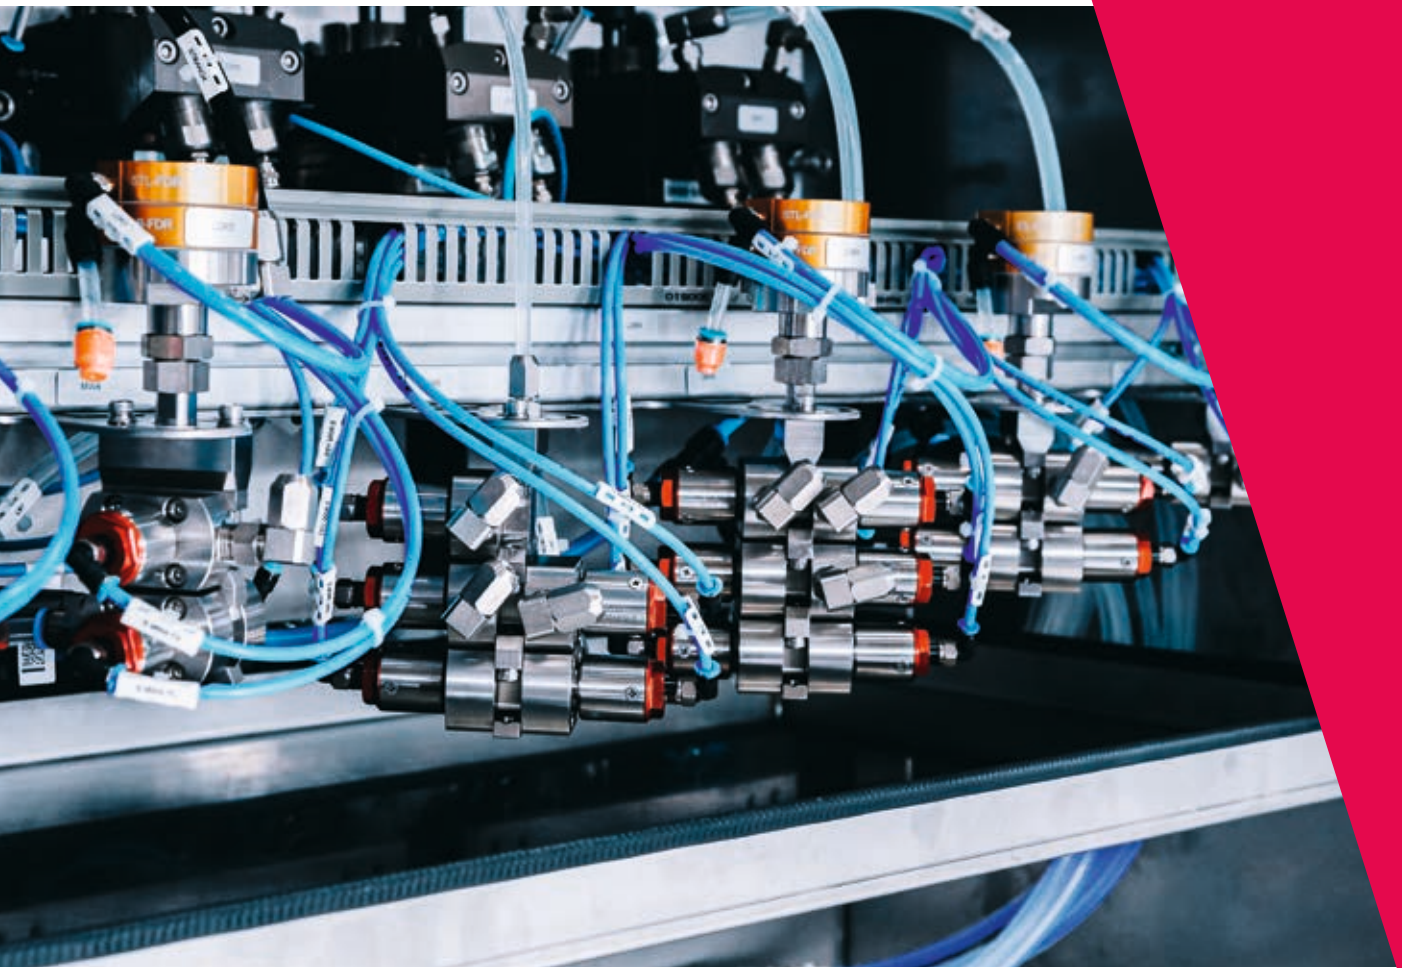

PaintSup System

Special colors and mini paint supply systems take place with high priority in all modern paint shops. Special attention is paid to a resource-saving, but also fast production process in color change systems. The

paint supply station is used for the preparation and application of the paints into the paint process. The arising rinsing media during the fully automated color change are collected in central dump systems.

Technical specifications

Rinsing Medium	Solvent, flushing media, air
Compressed air	Filtered air ø 12 mm, 7–10 bar
Material	Stainless steel, teflon
Double lip pig	ø 6 / 8 / 12 mm

PAINT SUPPLY

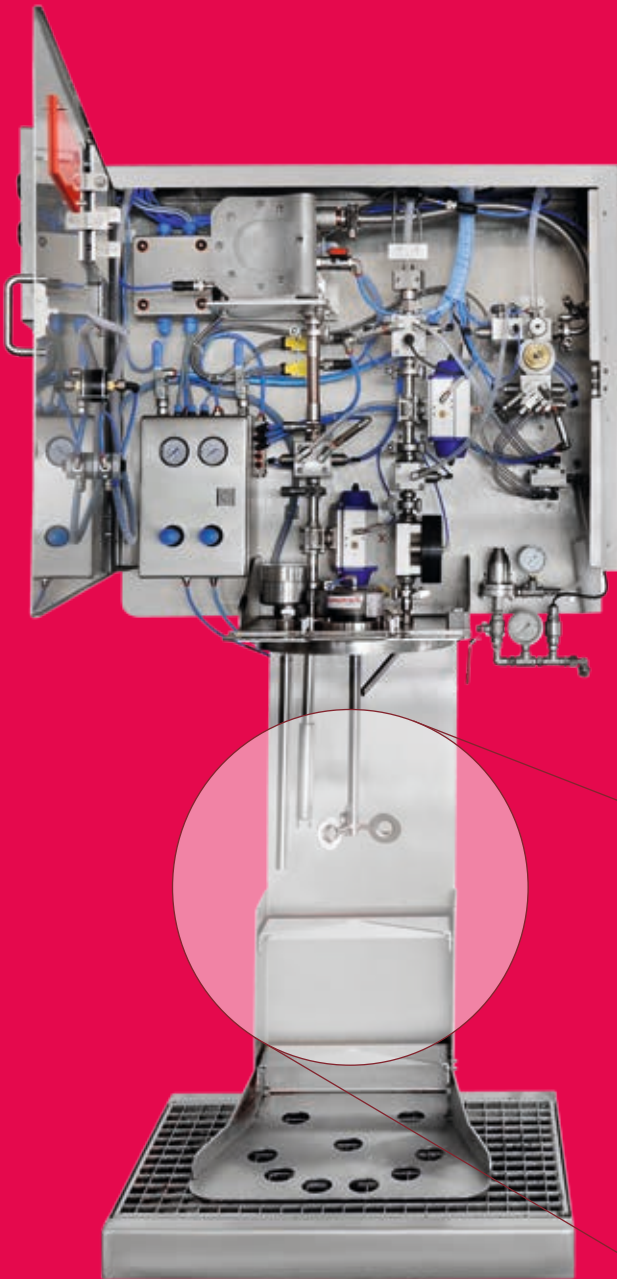

Special Color Paint Supply System

Smaller production batches and frequent color changes are one of the main challenges of modern paint shops. With the ASIS Special Color Paint Supply System we create the possibility for our customers to carry out the color change fast and highly automated.

The system is optimized for short color change times and reduces our customers' operating costs by down-size color loss and using less rinsing medium.

Uncomplicated and innovative

Control cabinet for special color paint supply

100%
MADE IN GERMANY

The Advantages

- Increased economic efficiency through process optimization & cost reduction
- Low paint and solvent consumption for color changes
- Material recovery
- Fast, comfortable material change
- Customer-specific systems
- Intuitive operation
- Automated color change
- Easy integration into existing processes
- High process reliability through level monitoring
