

SPECIAL COLOR SUPPLY SYSTEM

The ASIS Special Color Supply System®: fast color change with low paint loss for low operating costs.

Advantages

- Increased economic efficiency through process optimization & cost reduction
- Material recovery through pigging technology
- Low paint and solvent consumption for color changes
- Easy integration into existing processes
- High process reliability through monitoring the system-relevant process data
- Suitable for continuous operation due to ring line concept

PRODUCTS

Needle Valves

- Flush-optimised needle valves for medium changers
- PVC coating of the needle
- Housing made of stainless steel and aluminium
- Application of precision parts
- In-house development

Change Technology for 2 Component Mixing Systems

- Lean, space-saving, modular design
- Can be individually extended & combined through variable valve block layout
- Attachment of individual valve blocks possible
- Continuous, overlap-free, dead space-free material drilling
- Use of change technology for different media
